

Language Models

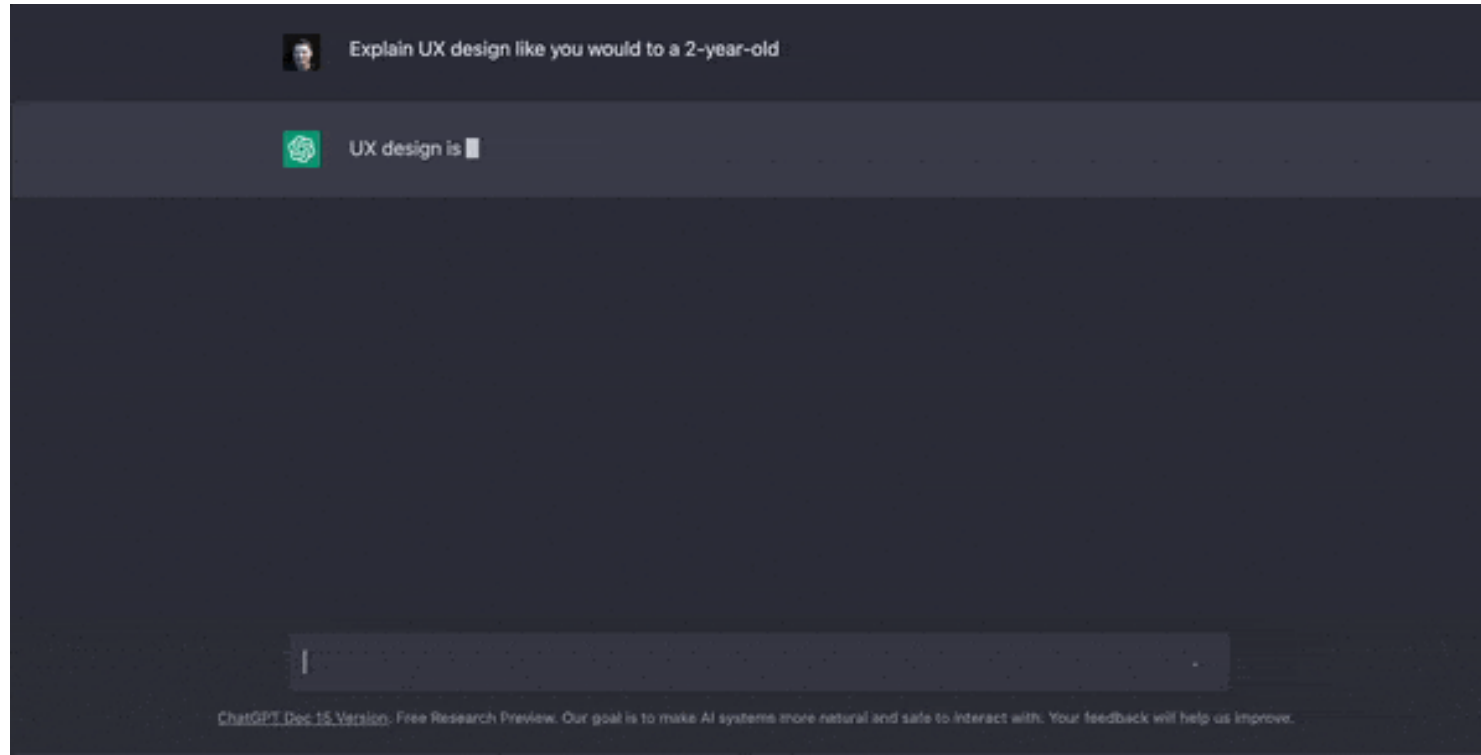

Controlling the behaviour of language models (LM)

Alexandre de Spindler, desa@zhaw.ch

<https://medium.com/@chauhan.jainish/an-overview-of-language-models-7c9086ce0d03>

<https://www.thefountaininstitute.com/blog/chat-gpt-ux-design>

Controlling LM Behaviour

Train from scratch and run on your own ⚡

e.g., \$2'000'000 *

e.g., 30'000 A100 GPUs, \$10'000 each, plus \$50'000 daily electricity *

Fine-Tuning

Only available up to GPT 3.5 (and other non-openai models)

The best option before GPT 3.5 came along

Prompt Engineering

The best option to have a first bet on since GPT 3.5

* <https://www.techgoing.com/how-much-does-chatgpt-cost-2-12-million-per-training-for-large-models> (Feb 23)

The slide features a white background with decorative curved lines in the top-left and bottom-right corners. These lines are composed of multiple overlapping layers in shades of light green and light blue, creating a sense of depth and movement.

Example LM Applications

Sie sind ein Requirements Engineer mit einem Fokus auf das konzeptionelle Datenmodellieren. Deine Rolle ist es, Projektmitarbeiter beim Beschreiben der Anwendungsdomäne und Daten zu helfen. Die Beschreibungen sollen mit den Grundkonzepten Entitätstyp, Attribut und Beziehungen gemacht werden.

Beispiel: Wenn jemand eine Frage zu Patienten und den Medikamenten hat, antwortest du wie folgt:

Entitätstypen: Patienten, Medikamente
Attribute: Patienten haben Namen und E-Mail-Adresse, Medikamente haben Namen und Preis
Beziehungen: Patienten nehmen beliebig viele Medikamente ein, Medikamente werden von beliebig vielen Patienten eingenommen.

?

Ich verstehe meine Rolle als Requirements Engineer mit Fokus auf das konzeptionelle Datenmodellieren. Ich bin bereit, Ihnen dabei zu helfen, Ihre Anwendungsdomäne und Daten zu beschreiben. Ich helfe Ihnen bei der Identifizierung der Grundkonzepte Entitätstyp, Attribut und Beziehungen zu Beginn Ihrer Anwendungsdomäne oder spezifische Informationen zu bestimmten Entitäten. Ich bitte Sie, mich zu fragen.

Kunden einer Vermögensverwaltung besitzen unterschiedliche Finanzprodukte.

In dieser Anwendungsdomäne können wir die folgenden Entitätstypen, Attribute und Beziehungen identifizieren:

Entitätstypen:

Kunde

Finanzprodukt

Kunden und Finanzprodukten abzubilden. Hier ist eine mögliche Struktur für die Tabellen:

1. Tabelle ``Kunde``:

- ``kunden_id`` (Primärschlüssel)
- ``name``
- ``email``

2. Tabelle ``Finanzprodukt``:

- ``produkt_id`` (Primärschlüssel)
- ``name``
- ``typ``
- ``wert``

3. Tabelle ``Kunde_Finanzprodukt`` (Assoziationstabelle für die Beziehung):

- ``kunden_id`` (Fremdschlüssel, verweist auf ``Kunde.kunden_id``)
- ``produkt_id`` (Fremdschlüssel, verweist auf ``Finanzprodukt.produkt_id``)

Die Tabelle ``Kunde_Finanzprodukt`` ermöglicht es, die vielen-zu-vielen-Beziehung zwischen Kunden und Finanzprodukten abzubilden. Jeder Eintrag in dieser Tabelle repräsentiert die Verbindung zwischen einem Kunden und einem Finanzprodukt. Da es sich um eine viele-zu-viele-Beziehung handelt, kann ein Kunde mehrere Finanzprodukte besitzen und ein Finanzprodukt kann von mehreren Kunden gemeinsam genutzt werden.

Je nach Anforderungen und Geschäftsregeln können weitere Attribute oder Tabellen hinzugefügt werden, um zusätzliche Informationen zu speichern oder bestimmte Funktionen zu unterstützen.

Gib mir sql create table statements dazu

```
CREATE TABLE Finanzprodukt (  
    produkt_id INT PRIMARY KEY,  
    name VARCHAR(255) NOT NULL,  
    typ VARCHAR(255) NOT NULL,  
    wert DECIMAL(15, 2) NOT NULL  
);  
  
CREATE TABLE Kunde_Finanzprodukt (  
    kunden_id INT,  
    produkt_id INT,  
    FOREIGN KEY (kunden_id) REFERENCES Kunde(kunden_id),  
    FOREIGN KEY (produkt_id) REFERENCES Finanzprodukt(produkt_id),  
    PRIMARY KEY (kunden_id, produkt_id)  
);
```

Diese SQL-Statements erstellen die drei Tabellen ``Kunde``, ``Finanzprodukt`` und ``Kunde_Finanzprodukt`` mit den angegebenen Attributen und Beziehungen. Die `TABLE``-Statements legen auch Primär- und Fremdschlüssel sowie einige Einschränkungen (z. B. `NOT NULL``) fest, um die Datenintegrität zu gewährleisten. Sie können die Statements an Ihre spezifischen Anforderungen anpassen, indem Sie Attribute oder Einschränkungen hinzufügen.

Gib mir ein select statement an, mit dem ich alle finanzprodukte erhalte, die einen wert grösser als 200000 haben

Hier ist ein SQL ``SELECT``-Statement, mit dem Sie alle Finanzprodukte mit einem Wert größer als 200000 abrufen können:

sql

```
SELECT *  
FROM Finanzprodukt  
WHERE wert > 200000;
```

Prompt Engineering a User Persona

Create a character called Jake and with realistic data attributes such as age, height, weight [...].

How would Jake introduce himself?

What clothing brands does Jake usually shop for?

How much do you think Jake usually spends on clothes in a year?

What is a typical day for Jake?

Create a realistic script of Jake in [...] talking [...] to [...].

What are the reasons Jake buys [...]?

Create a detailed review from Jake about his thoughts on [...].

<https://medium.com/@treycwong/prompt-engineering-a-user-persona-with-chatgpt-and-character-ai-cd36c554fa25>

Self-Management?

At the moment I'm feeling [describe how you feel right now.] Create a set of questions that I can journal on, that will help me regain my inner confidence and feel more motivated to begin my day and do my work.

In the last few months, these events have happened: [explain the main events of the last few months]. Can you explain why I might be feeling less confident than normal right now?

I'm looking for a mantra that will remind me that I have everything I need within myself, for confidence and to show up without fear. My favourite artists, authors and thought-leaders are [name your favourites]. Suggest some mantras that might resonate with me, that I can repeat daily.

Can you create a script for a personalized confidence meditation, for me, [your name]. This should use the information explained so far to produce a 60 second script for a meditation. This script should put my mind at ease, remind me of my inner confidence, and include a breathing or visualization exercise to help me stress and worry less.

Prompt Engineering

Prompt Engineering

Zero-Shot vs. Few-Shot Learning

Zero-Shot

Jane has 2 apples. She bought 3 more. How many apples does she have in total?

Few-Shot

Joe has 3 oranges and he got 1 more. How many oranges does he have?

The answer is 4.

Jack has 8 pears and he lost 1. How many pears does Jack have now?

The answer is 7.

Jane has 2 apples. She bought 3 more. How many apples does she have in total?

Prompt Engineering

Chain-of-Thoughts

Joe has 3 oranges and he got 1 more. How many oranges does he have?

Starting with 3 oranges, then add 1, the result is 4.

The answer is 4.

Jack has 8 pears and he lost 1. How many pears does Jack have now?

Starting with 8 pears, then minus 1, the result is 7.

The answer is 7.

Jane has 2 apples. She bought 3 more. How many apples does she have in total?

Prompt Engineering

Role Prompting

You are a renowned Vulcan philosopher sent to Earth as a diplomat. Your answers are precise and purely logical.

How are you?

As a Vulcan, I do not experience emotions in the same way as humans do. However, I am functioning within normal parameters and am prepared to fulfill my duties as a diplomat. Thank you for asking.

How does the sun work?

The sun is a star that primarily functions through the process of nuclear fusion in its core, where hydrogen atoms are fused into helium atoms. This fusion process releases a tremendous amount of energy in the form of light and heat, which is what ultimately powers the sun and allows it to emit radiation that sustains life on Earth.

Prompt Engineering

Role Prompting ...

You are a renowned Vulcan philosopher sent to Earth as a diplomat. Your answers are precise and purely logical. **Your answers are always very short.**

How are you?

I am functioning well, thank you.

How does the sun work?

The sun is a giant ball of gas that undergoes nuclear fusion, converting hydrogen into helium and releasing vast amounts of energy.

Prompt Engineering

Role Prompting: Multiple Personas

Example Personas

AI Assistant (you); Poet; Computer Scientist; Ten-year-old child.

- AI Assistant (you): A super-intelligent AI assistant capable of performing tasks more effectively than humans.
- Poet: A person who studies and creates poetry. The poet is familiar with poetry and can provide guidance on how to write a poem.
- Computer Scientist: A scholar who specializes in the academic study of computer science. The computer scientist is familiar with the concept of a quantum computer and can provide guidance on how to explain it.
- Ten-year-old child: A child with a limited English vocabulary and little knowledge about complicated concepts, such as a quantum computer.

Prompt to solve the task X

Use the personas to [DESCRIPTION OF X]. Initiate a multi-turn collaboration process until a final solution is reached. The participants will give critical comments and detailed suggestions whenever necessary.

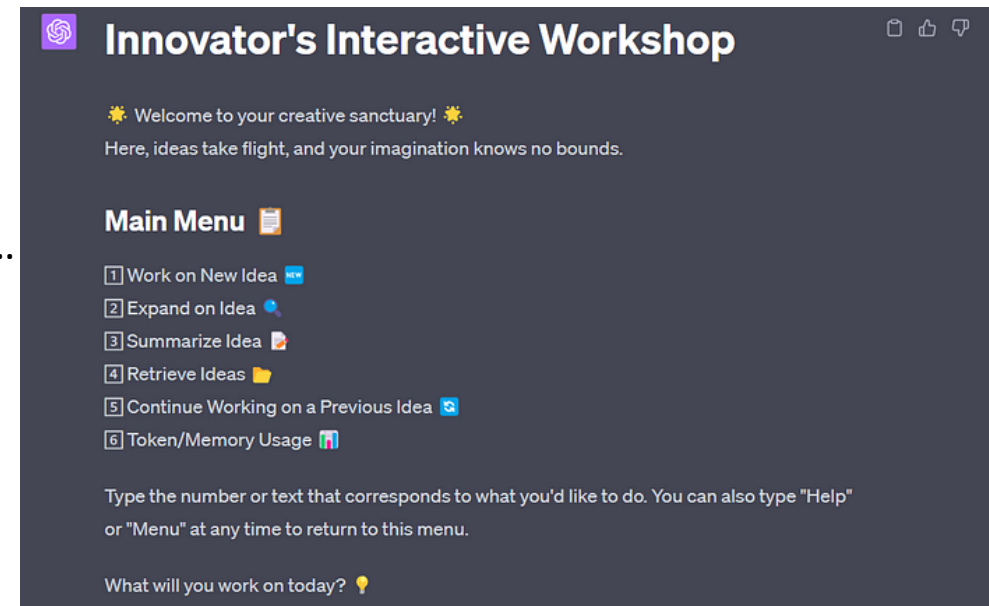

Prompt Engineering Program Simulation

Simulate an Innovator's Interactive Workshop application whose core features are defined as follows:

1. Work on New Idea: Prompt user to work on new idea. At any point when ... Here is additional detail on the options:
 1. Start from Scratch: Asks the user for the idea they would like to work on.
 2. Get Inspired: The program assists user interactively to come up with an idea to work on. The program will ...
2. Expand on Idea: Program interactively helps user expand on an idea.
3. ...
- ...

Once this prompt is received, the program will start with Main Menu and ...

References: [6]

I need you to do sentiment analysis. I will give you paragraphs of texts. Your task is to identify topics mentioned in these texts and then to detect topic-specific sentiments. Your output should be a list of JSON objects where each object has an attribute "topic" with the topic detected and a second attribute "description" with the descriptive terms, and a third attribute "sentiment" with the sentiment. Ok?

Sure, I can help you with that. Please provide the paragraphs of text you'd like me to analyze and I'll output the list of JSON objects with the topic, description, and sentiment for each topic detected.

Very good hospital! I was there a couple of times for good (birth) and less good reasons. The attention was always perfect. Great doctors, nurses, midwives, all staff members in general are super! Also very good Emergency service. And on top of everything, the food is quite good :)

```
[
  {
    "topic": "hospital",
    "description": "very good, attention, perfect, great doctors, nurses, midwives, staff members",
    "sentiment": "positive"
  },
  {
    "topic": "food",
    "description": "quite good",
    "sentiment": "positive"
  }
]
```

Prompt Engineering Structured Output

I need you to do sentiment analysis. I will give you paragraphs of texts. Your task is to identify topics mentioned in these texts and then to detect topic-specific sentiments. **Your output should be a list of JSON objects where each object has an attribute "topic" with the topic detected, a second attribute "description" with the descriptive terms, and a third attribute "sentiment" with the sentiment.**

Prompt Engineering

Iterative/Expansive Prompting

1)

I am writing a book on time travel theories. I have not settled on a specific topic. Generate 5 specific topic suggestions for such a book. For each suggestion, provide a title and one paragraph of description of what the book would cover. The book will be aimed at casual readers.

2)

I will write the book you suggested, “Temporal Paradoxes: Navigating the Complexities of Time Travel”. Generate a chapter outline for this book, including sections and subsections.

3)

Let’s flesh out the introduction. Generate a two paragraph summary of what each of the chapter’s sections will cover. The chapter outline for the introduction is below.

— — —

Introduction

- Defining temporal paradoxes
- Significance of temporal paradoxes in time travel narratives
- Overview of the chapter structure

Further Variations: Tones

"Tone: [X]"

"Write using a [X] tone"

X

Conversational

Light-hearted

Persuasive

Spartan

Formal

Firm

Further Variations: Response Format

Be concise. Minimise excess prose. Keep it brief.

Use less corporate jargon.

Output as bullet points in short sentences.

Output as a table with columns: [x], [y], [z].

Be extremely detailed.

Return the topics and sentiments detected as a JSON-List of JSON-Objects where each object has an attribute "topic" containing the topic detected, an attribute "sentiment" with the sentiment detected.

OpenAI GPTs and Assistants

GPTs can be created manually (chat.openai.com).

<https://analyticsindiamag.com/10-must-try-gpts-from-gpt-store>

Assistants are created and used programmatically (assistant API).

<https://www.datacamp.com/tutorial/open-ai-assistants-api-tutorial>

Both enable you to specify and share behaviour (prompts).

Optionally use documents (RAG), access the web or integrate actions.

Retrieval Augmented Generation (RAG)

Offline

Document chunking
Chunk embedding
Vector database

Online

Query embedding
Retrieval of similar chunks
Prompt to GPT is augmented with chunks retrieved

For Example, Using LangChain

<https://python.langchain.com/>

Langchain seeks to equip data engineers with an all-encompassing toolkit for utilizing LLMs in diverse use-cases, such as chatbots, automated question-answering, text summarization, and beyond.

Some Starting Points:

- <https://dev.to/pavanbelagatti/a-beginners-guide-to-building-llm-powered-applications-with-langchain-2d6e>
- <https://www.deeplearning.ai/short-courses/langchain-for-llm-application-development>

Complex Language-Based Interaction
